

## E-Security Project At Annaram Dam Construction Site

Brihaspathi Technologies Installed PTZ Cameras at Annaram Dam construction site, a government project. Afcons Infrastructure Limited took over the project. The site office is 5km far from the construction site. To Monitor the site area, we placed 4 PTZ Cameras which is of 2MP, 30X each. By this surveillance system, we can keep a record of employees, visitors and the infrastructure.

The process involves installation of PTZ cameras with 2MP, 360-degree rotation each. The PTZ camera has a point to point access through a wireless radio technology. The cameras are placed in 4 different places of the site location. Each wireless radio is connected to the pole that in turn communicates with the sectorial antenna.
